Score 4971 from GregoBase, with line breaks inserted to match the original printed source. Every B is flatted (te); for example, the flat on *pervia* extends to the end of the line, so the B in *porta* is flatted.

Without explicit line breaks, the B in *stella* should be flatted, but is not.

If the width is changed slightly, the B in *stella* is correct, but the B in *Virgo* is incorrect.
